Nutritional Supplementary Boost

2017 Revive Weight Trial

Lamb fattening trials conducted on Charlie Duncan Marton fattening farm.

This trial was designed to establish the benefits of increasing vitamins A, D, & E plus B12.

A mob of 188 weaned lambs were selected and brought in to take part in this trial, the two mobs were split into groups of 94 in each as control & treatment groups.

The treatment group received one 20ml drench of palaMOUNTAINS REVIVE.

Both groups of lambs received a permanent spray top of the shoulder (green dot for treatment, red for control). The two groups were then grazed on grass paddocks only, for 42 days.

CONTROL GROUP:

Average weight 11/5/2017:

27.5kg

Average weight 21/6/2017:

32.02kg

TREATMENT GROUP:

Average weight 11/5/2017:

27.0kg

Average weight 21/6/2017:

32.62kg

SUMMARY:

1. Avg weight increase of control group: **4.52kg**
2. Avg weight increase of treatment group: **5.62kg**
3. Treatment group produced a **24.33% weight increase**
4. This equates to a **5,236% return on investment**
5. The treatment group were all **100% clean of any scouring**
6. 10% of the control group displayed signs of scouring which contributed to the control groups reduced weight performance

OVERALL GROUP WEIGHT INCREASE:

103.4kg

AVERAGE PER LAMB WEIGHT INCREASE:

1.10kg

THAT'S AN AVERAGE IMPROVEMENT OF

26gms per day

OVER THE CONTROL GROUP.
